

Handheld (PDA) Specification

January 2008

www.DavisonSoftware.com

Davison Software programs for handheld run on any handheld device that runs Palm OS. We do not currently support Pocket PC devices with Windows CE™. Software on the Handheld installs easily from Davison CMMS.

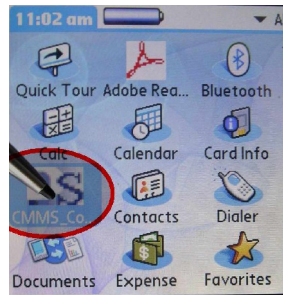

Davison Software does not sell handheld devices. Costs for handheld devices shown here are approximate and subject to change by the manufacturer. The common, available device is the Tungsten E2 or equivalent with a cost of about \$200.00. Total cost for Tungsten E2 with an SD card is less than \$250.00

Handheld in plastic for
weatherproof operation

Software installs to the handheld from Davison CMMS and PredictMate®. Pictures (images) display on the handheld, related to equipment, inventory parts, work orders, or PM tasks.

Images for handheld are created in Davison CMMS, then transferred to the PDA as shown:

With a barcode scan card device, the PDA can search the stock code (part number) or equipment code. For example, the user must open Part Information, and then press the barcode button.

Secure Digital Scan Card (SDSC) Series 3 about \$250.00
